                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   88

CC The method involves administering hypoxia inducible factor-1 (HIF-1) complex modulators. Modulation molecules or small ubiquitin-like-modifier (SUMO)-1 binding molecules or antisense mucleic acid molecules and CC subject having molecules or antisense mucleic acid molecules and CC subject having or at risk of developing haematologic malignancy or MDR CC (e.g. a lymphoid disorder or a myeloid disorder). The lymphoma, myeloma or chronic lymphoproliferative disorders include chronic or acute myeloid leukaemia. The myeloid disorders include chronic or acute myeloid leukaemia, e.g. angiogenic myeloid metaplasia, essential thrombocythaemia or polycythaemia vera. The came HIF-1 hinding aire nan

```

This is a preferred fragment of the mdr-1 gene promoter, isolated human DNA. The mdr-1 promoter and enhancer elements are inducible cytostatic agents such as vincristine and adriamycin which are use cancer therapy. Vectors comprising the promoter and enhancer seque

lucible by are used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of treating a subject having or at risk CC of developing a haematologic malignancy or multidrug resistance (MDR). CC The method involves administering hypoxia inducible factor-1 (HIF-1) CC binding molecules or small ubiquitin-like-modifier (SUMO)-1 binding CC molecules or small ubiquitin-like-modifier (SUMO)-1 binding CC element (HRE) binding molecules or antisense mucleic acid molecules and CC (SUMO-1 binding molecules or antisense molecules are useful for treating a CC (e.g. a lymphoid disorder or a myeloid disorder). The lymphoid disorders include lymphocytic leukaemia or chronic lymphoproliferative disorders CC e.g. lymphoma, myeloma or chronic lymphoid leukaemia. The myeloid CC disorders include chronic or acute myeloid leukaemia, e.g. angiogenic CC invention is used in gene therapy. The present sequence is an antisense CC oligo targetted to HRE in the mdr1 gene (mdr1-HRE) to inhibit its CC expression. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
This invention describes a novel method of determining cytosine CC methylation in a sample of genomic DNA which comprises treating the CC sample with hydrogen sulphite so that the cytosine is converted to uracil CC whilst 5-methylcytosine remains unchanged, amplifying sections of the DNA CC using at least 2 PCR primers and studying the base composition of both CC complementary amplified strands whereby methylation status is deduced CC from the difference in molecular weight of the two strands. The method is CC used to diagnose and/or prognose unwanted side effects of medication, CC cancer, central nervous system disorders, aggression symptoms or CC cancer, central nervous system disorders, aggression symptoms or CC behavioural disorders, clinical, psychological and social consequence of Drain damage, psychotic and personality disorders, dementia and CC associated disorders, cardiovascular disease, malfunction, damage or CC disease of the gastrointestinal tract, breathing system, bone muscle, cendocrine or metabolic system, injury, infection, abnormal development or Sexual malfunction. This sequence represents the human MdrI DNA fragment CC amplified by the PCR primers represented in ABX94593 & ABX94594 and is CC used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                        This is a preferred fragment of the mdr-1 gene promoter, isolated from human DNA. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents. The mdr-1 promoter and enhancer elements are inducible by cytostatic agents such as vincristine and adriamycin which are used in cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, II-2, II-6, etc.) can be expressed in cancer cells under the control of cytostatic agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer therapy. Vectors comprising the promoter and enhancer sequences operably linked to heterologous genes coding for therapeutic agents are claimed. Using the vectors, the therapeutic agents (e.g. anti-oncogenes, interferon, IL-2, IL-6, etc.) can be expressed in cancer cells under the control of cytostatic agents. Oligonucleotides from the present invention can be used: for differentiating between healthy hasmatopoletic cells and proliferative disorder hasmatopoletic cells; for differentiating between acute lymphocytic leukaemia and acute myelogenous leukaemia; as probes for determining the cyrosine methylation state and/or single nucleotide polymorphisms (SNPs) of hasmatopoletic cell proliferation disorder related sequences and their complements; and as primers for the amplification of hasmatopoletic cell proliferation disorder related DNA sequences. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between subclasses, diagnosis, prognosis, treatment and/or monitoring of hasmatopoletic cell proliferative disorders. The present method enables a highly specific classification of hasmatopoletic cell proliferative disorders. The present method enables a highly specific classification of hasmatopoletic cell proliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or a series of reagents, where the reagent or series of reagents distinguishes between methylated and non methylated CpG dinucleotides within the target nucleic acid. The molecules of the invention demonstrate cytostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative disorders, including cancers such as colon adenoma and colon carcinoma. The PNA (peptide nucleic acid)-oligomers are useful as probes for determining cytosine methylation state or single nucleotide polymorphisms. The current sequence is that of the genomic DNA region of the invention. This sequence is not shown within the specification but is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 46; SEQ ID NO 1; 74pp; English

The genes and/or their regulatory regions are preferably selected cf from MDR1, CSNX2B, EGR4, AR, CDK4, RB2, CDC52A, GPID beta, MYOD1, CDH3, CC GSTP1, HIC-1, MGMT, MLH1, MOS, MYC, PTEN, RBL2, TGFBR2, TP73, CDKNIC, CC GSTB1, HIC-1, MGMT, MLH1, MOS, MYC, PTEN, RBL2, TGFBR2, TP73, CDKNIC, CC GSK3beta, ESR1, APAF1, BAK1, BAX or HOXA5. Oligomers, peptide nucleic acid (PNA)-oligomers and/or isolated mCA5. Oligomers, peptide nucleic of the genes are useful for detecting the methylation state of all the CC GpG dinucleotides within one or more the sequences, or their complements, conditions such as diffuse large B-cell lymphoma, mantle cell lymphoma. They are also useful for detecting at least two of the medical conditions such as diffuse large B-cell lymphoma, and follicular CC differentiation between subclasses, diagnosis, prognosis, treating and/or represents the 5' and/or regulatory region from one of the above contitioned canea.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

The invention relates to

ω

novel method

for

predicting

the

responsiveness

Isolated nucleic acid molecules having polymorphisms in known human ge e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for

WPI; 2002-698522/75

The method of the invention has cytostatic acidity, and may have a use in gene therapy. The set of oligonucleotides comprising at least two of the oligoners are useful for detecting the cytosine methylation state and/or single nucleotide polymorphisms (SNPs) within the sequences. The methods, nucleic acid, oligonucleotide, and kit are useful for the treatment, characterisation, classification and/or differentiation, of predicting the responsiveness of a subject with a cell proliferative disorders. The method is also useful for predicting the responsiveness of a subject with a cell proliferative disorder of the breast tissues to a therapy. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WO200257410-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.

CC dentifying the genes responsible for specific traits within the genome and eventually CC dentifying the genes responsible for a variety of disorder related CC arises as a result of their e.g., overexpression, constitutive CC and/or treating the disorders. The nucleic acid molecules comprising the polymorphic sequences contained in CYP4501A1, CYP4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to generation of non-human transgenic animals comprising a reporter construct for producing a detectable amount of a reporter molecule operably linked to a transcriptional regulatory nucleic acid molecule from the human CYP3A4 gene. The invention also relates to transgenic animal for analysing CYP3A4 cytochrome P450 gene regulation. The non-human mammal of the invention is useful for determining whether a compound is capable of effecting the transcription of a human CYP3A4 gene. It is also useful for determining the effect of a compound such as a xenoblotic or steroid on the regulation of expression of the CYP3A4 gene in a human. The present sequence is 5' flanking region of human (p-glycoprotein) MDR1 gene. This sequence is used as a regulatory element in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Non-human mammal for determining the effect of a compound on regulation of CYP3A4 gene expression, comprises a reporter construct for producing reporter linked to a transcriptional regulatory nucleic acid from a hum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2002-537301/57,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The present invention describes the use of irinotecan (I) or its CC derivative for the preparation of a pharmaceutical composition for CC treating colorectal, cervical, gastric, lung, ovarian or pancreatic CC cancer, or malignant glioma in a subject having a genome with a variant CC allele which comprises a cytochrome p450, subfamily IIIA (nifedipine CC cytostatic activity. The therapeutic applications of (I) and (II) have CC cytostatic activity. The therapeutic applications of (I) is improved, CC diage and/or an appropriate derivative of (I). Therefore, undesirable, CC dared or toxic effects are efficiently avoided. Unnecessary and CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonresponders), as well as the development of CC treatment with substances (nonr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

can be used for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject, where the subject is a human (preferably African or Asian) or a mouse. The present sequence represents a sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                     its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a multidrug resistance protein 1 (MRP1) polynucleotide (II). (I) has cytostatic activity. (I) or its derivative
